Dear Social Scientific Data Analysis Teachers,

Here are some self-assessment survey results of our new cohort of 33 students, so you see something about their backgrounds! If you need the individual-level data (e.g. for making groups), please let me know. (simp55 teachers: I will be forming the groups for the whole course).

Very best, Chris

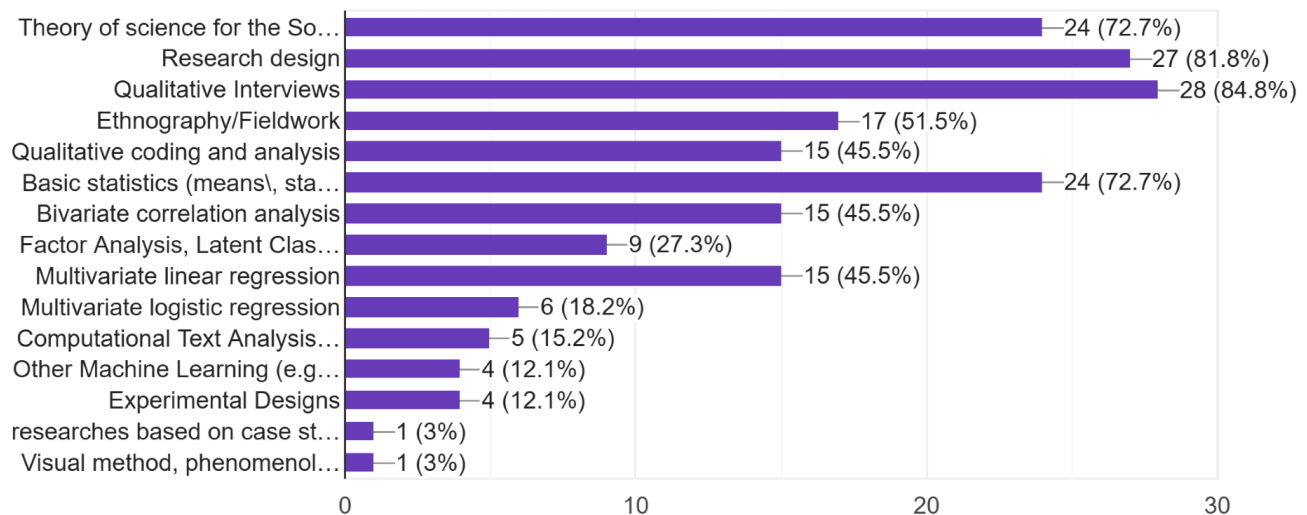

My (likely) major at Graduate School, based on my previous studies

33 responses

I have taken at least one university-level course that partially covered the following, even if I am not an expert in them (check all that apply): -

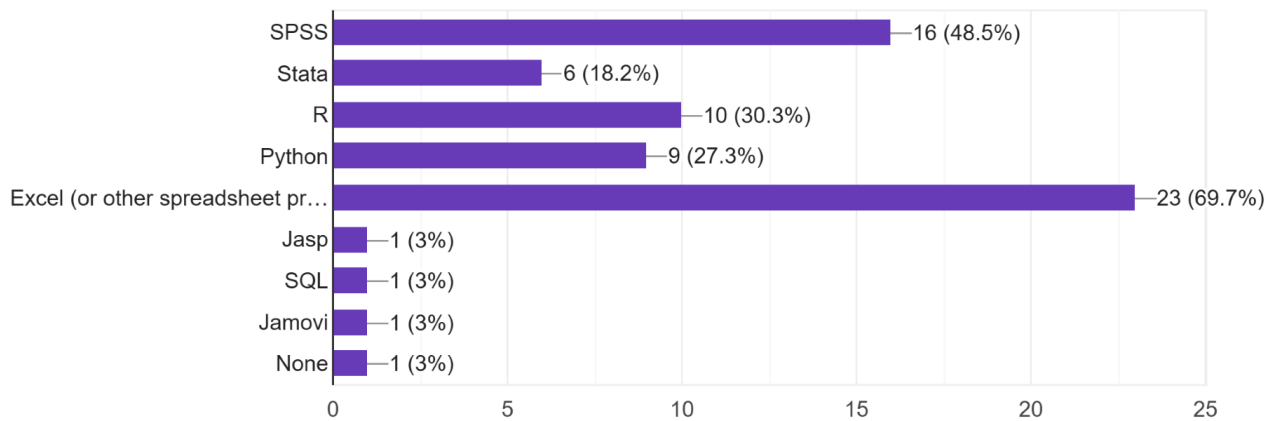

33 responses

I have used quantitative analysis software and/or programming languages before, even if briefly.

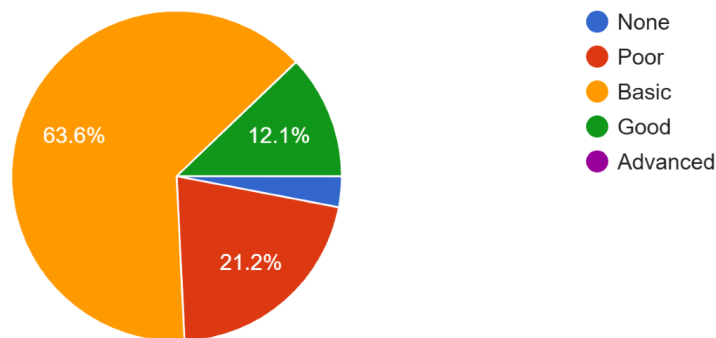

(Check all that apply)

33 responses

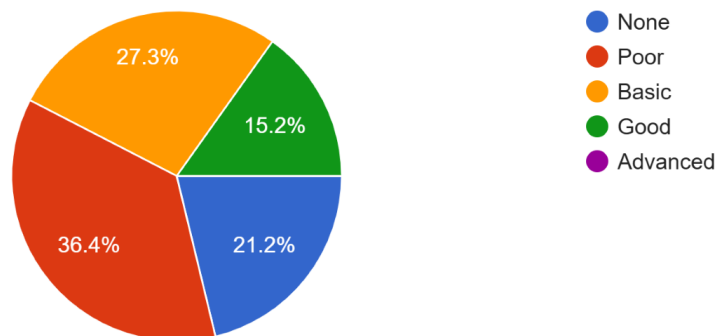

I would assess my own knowledge in statistics in the following way:

33 responses

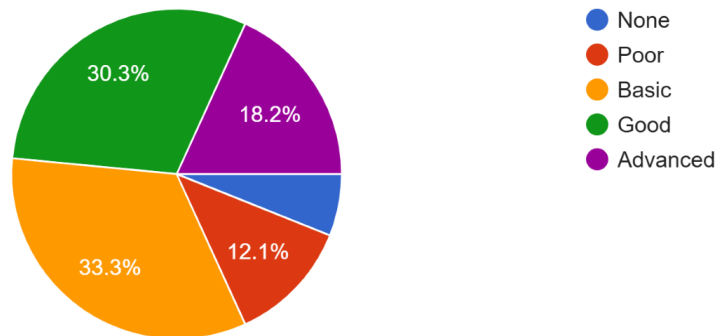

My knowledge in quantitative research methods to include multivariate regression (please choose one):

33 responses

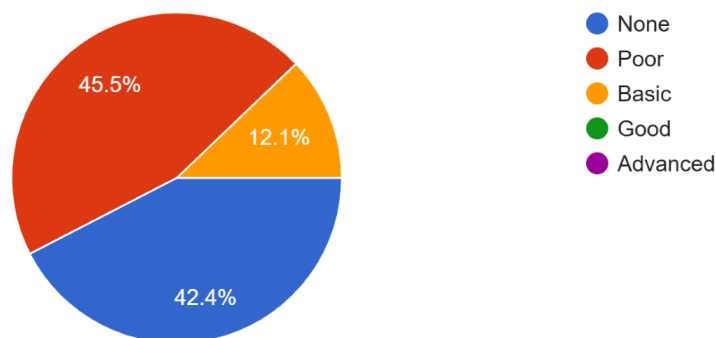

My knowledge in qualitative research methods, to include interviewing experience and analysis of interview transcripts (please choose one):

33 responses

My knowledge in computational research methods, to include machine learning and/or computational text analysis (please choose one):

33 responses

My knowledge in mixed methods, using multiple methods from different paradigms in the same study (please choose one):

33 responses
